

Reimagining the future of Romande Energie

And if optimizing consumption became a game.

Rania Ben Hamidane, Mira Fedotova, Vanessa El Khoury, Noé Délèze, Eric Bulka

Context

Decentralization

Decarbonation

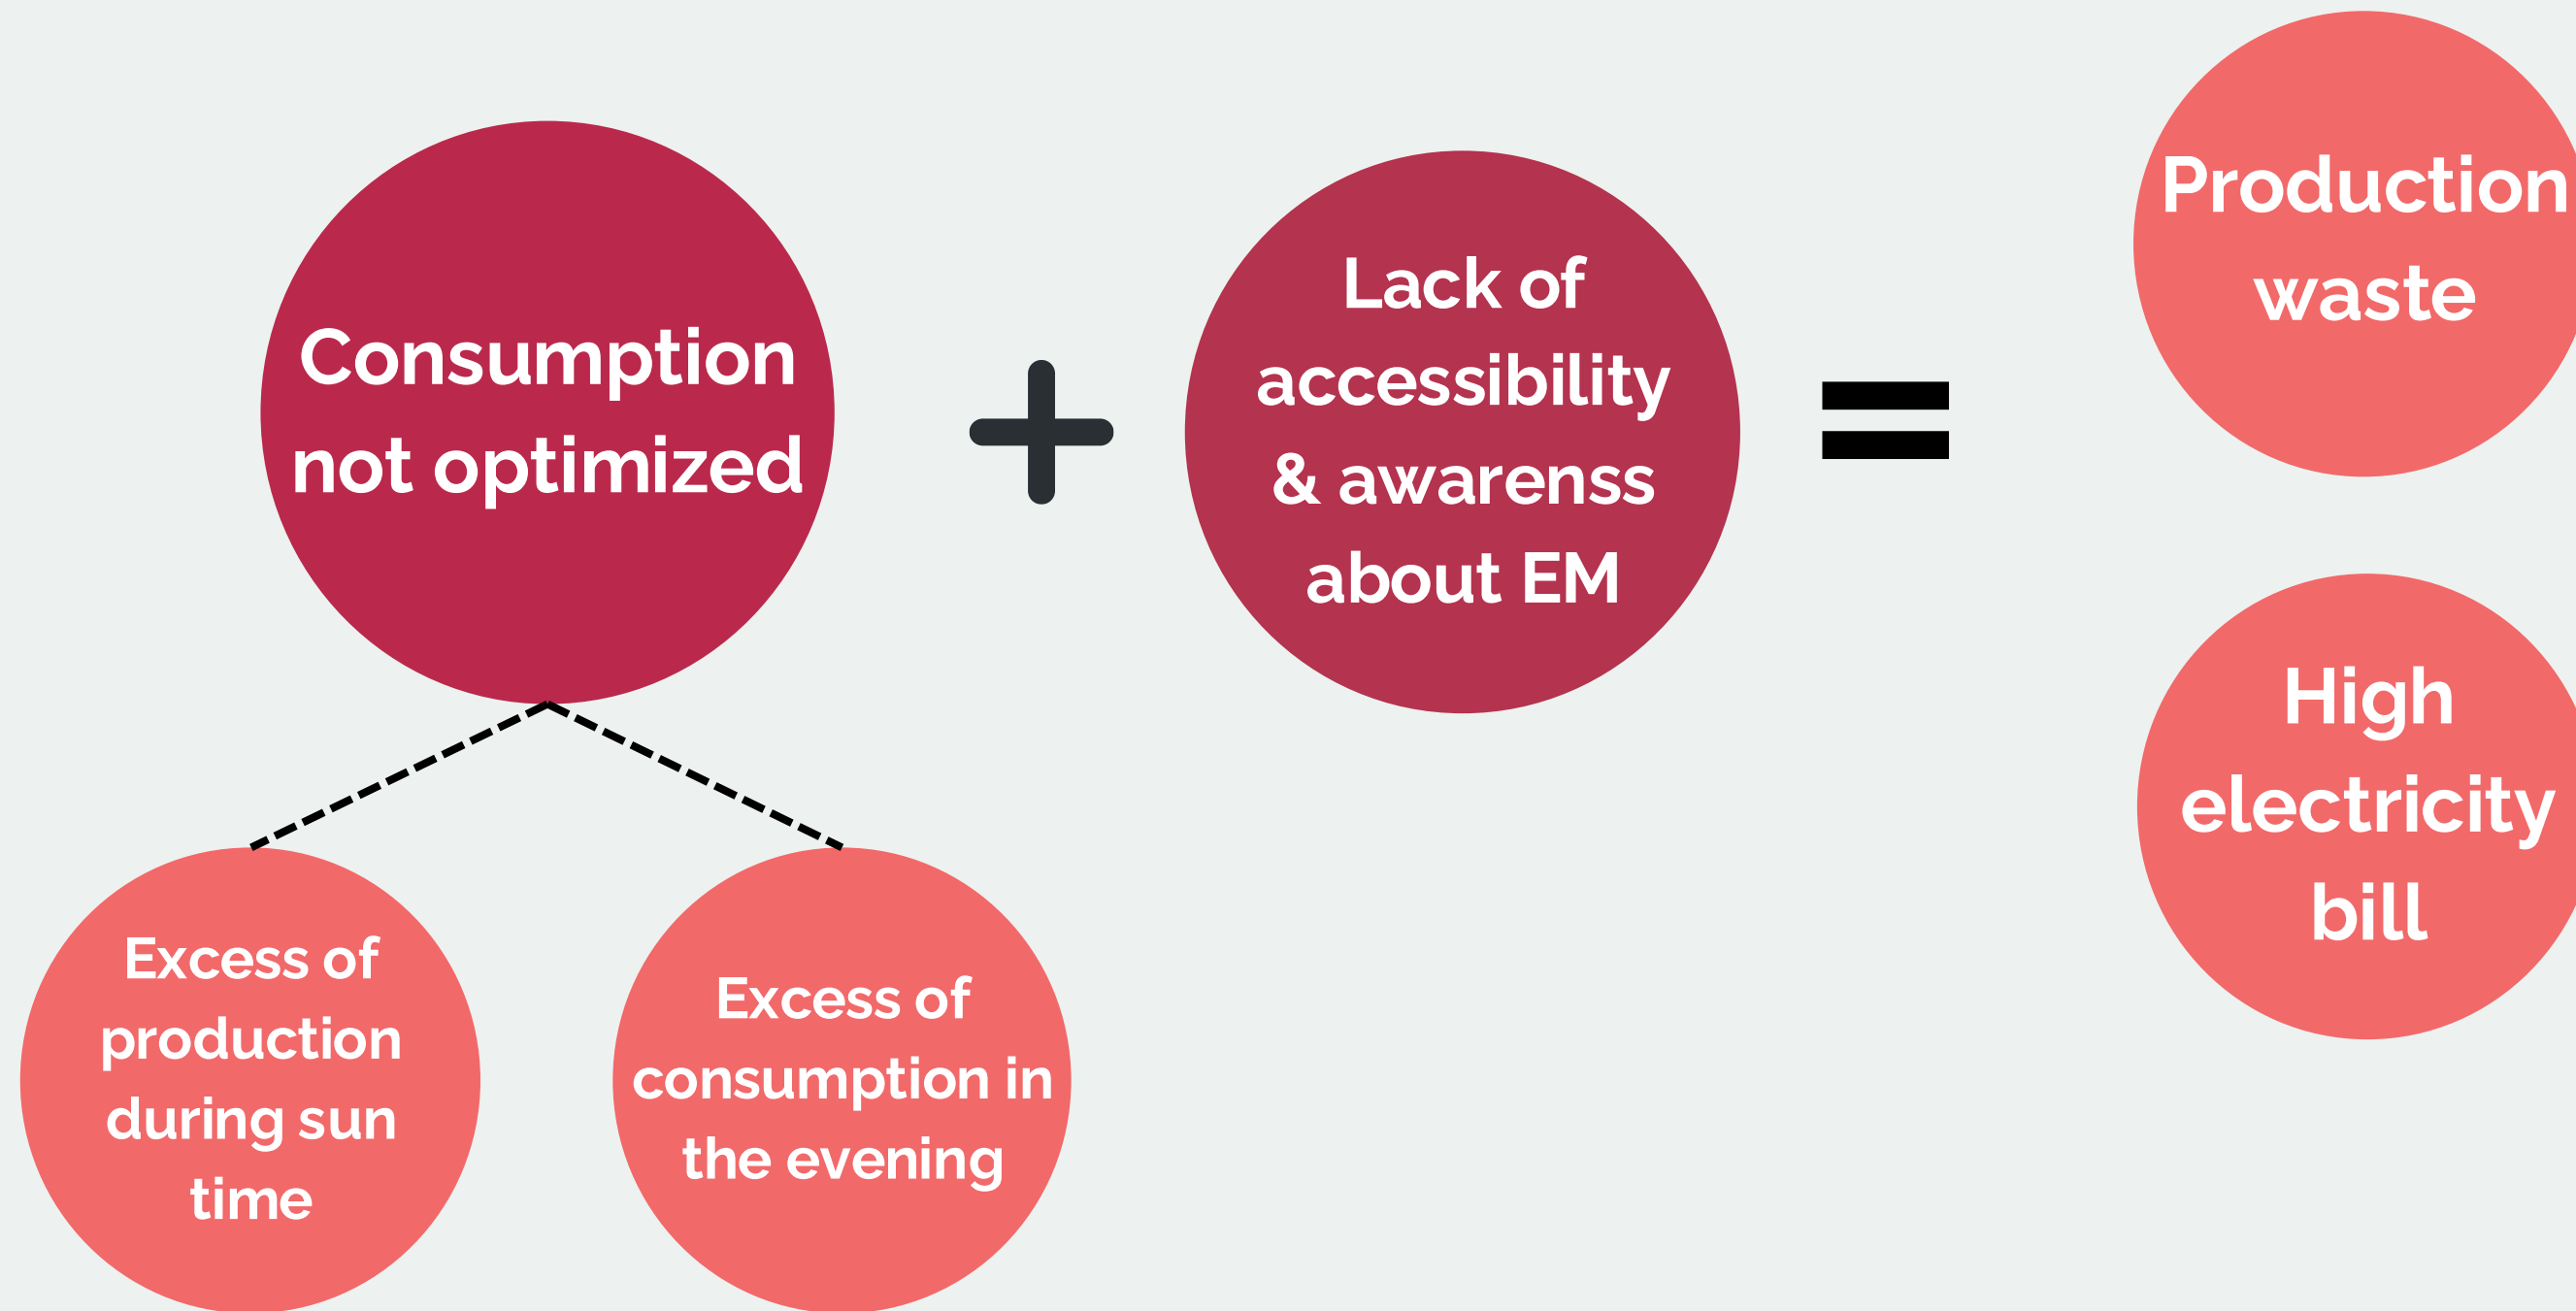

Digitalisation

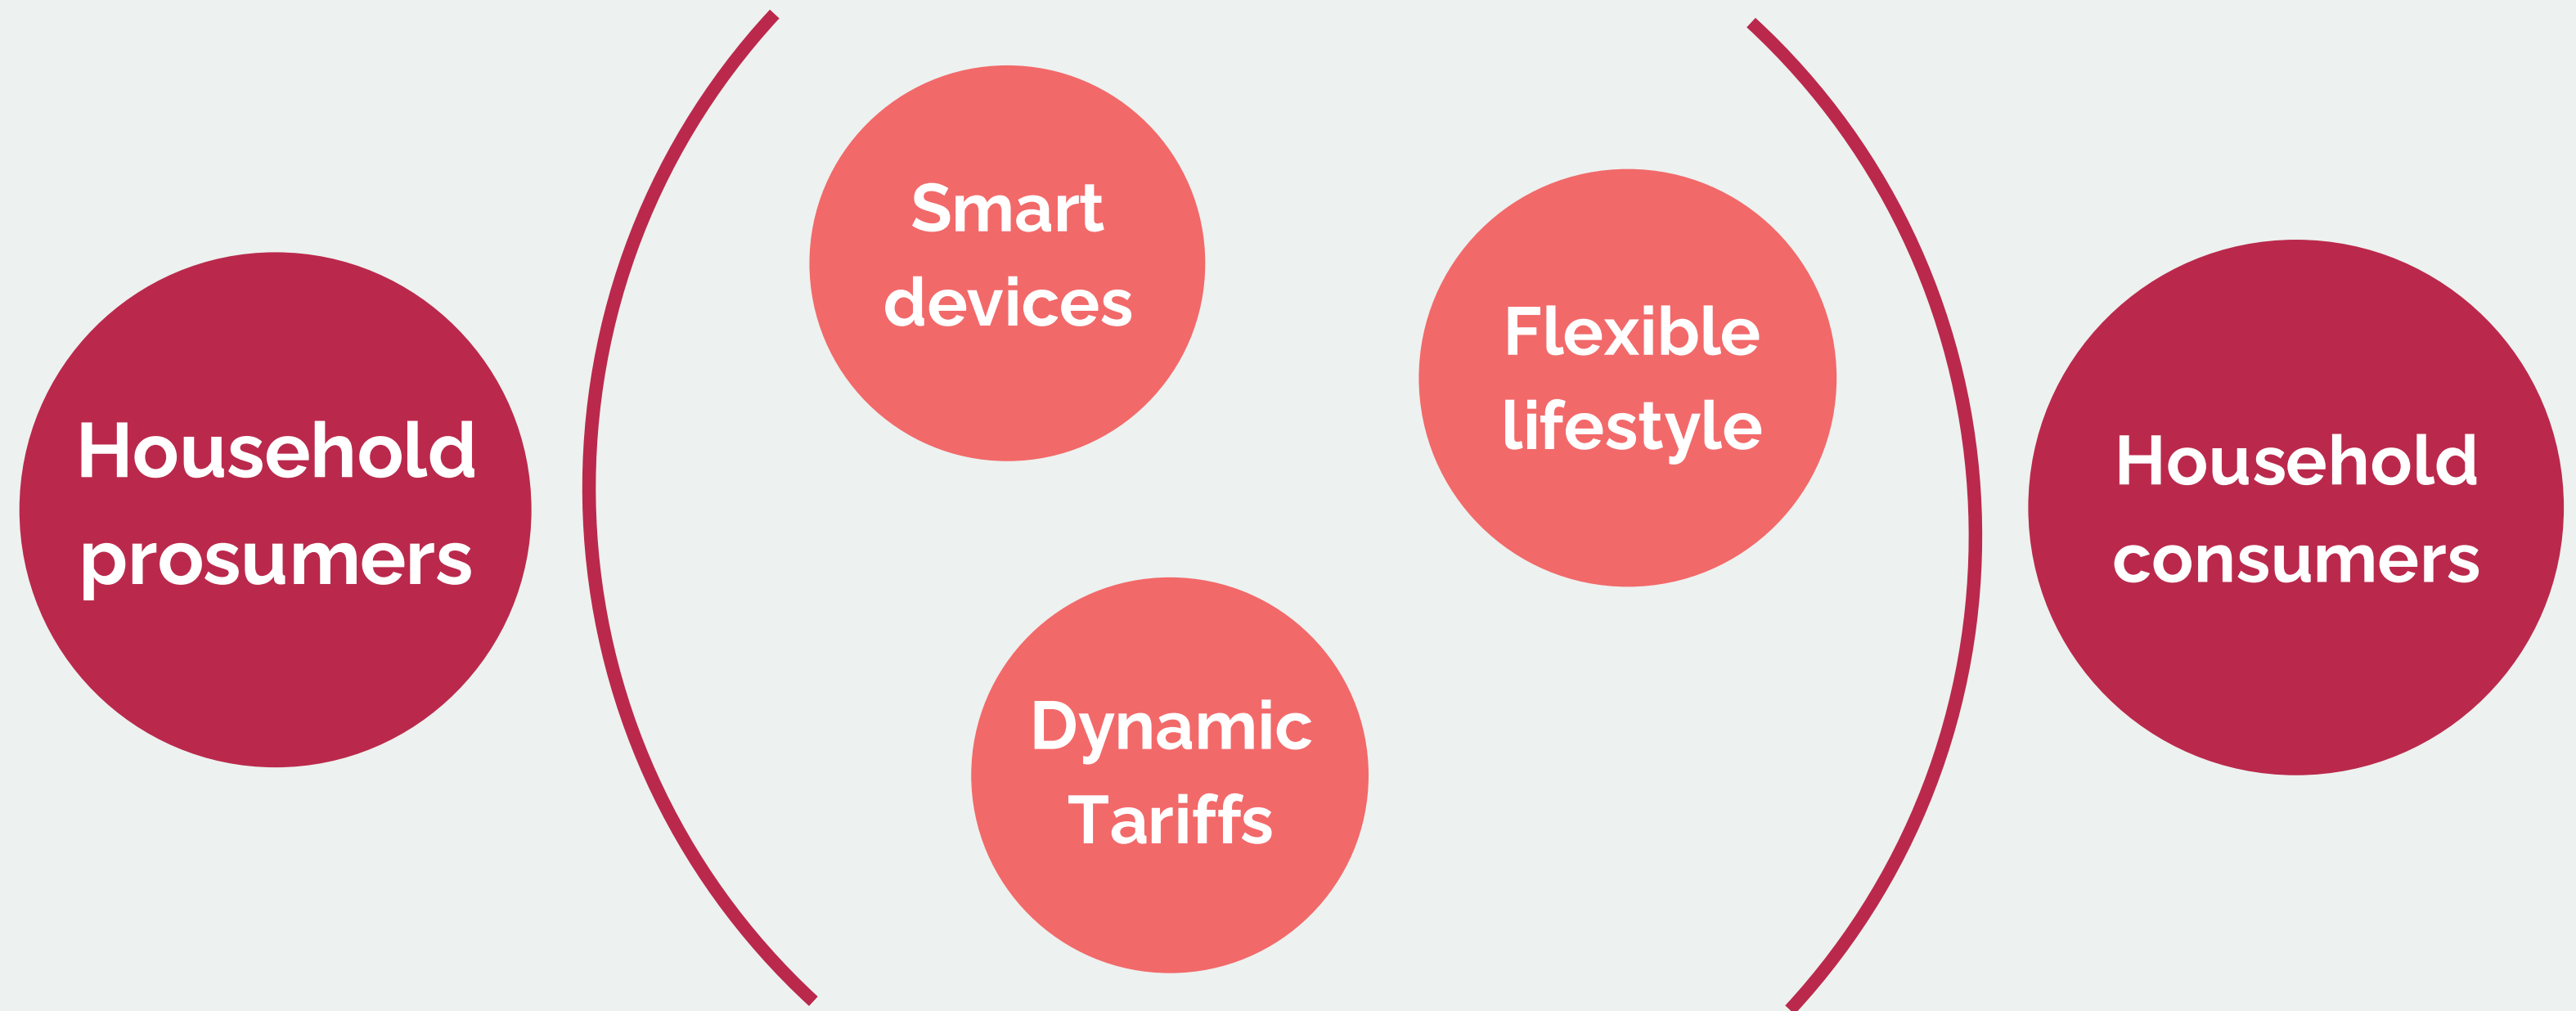

Problems

What are the problems?

Who are we helping?

Energy Management System

- Optimize consumption
- AI-driven
- Outsourced

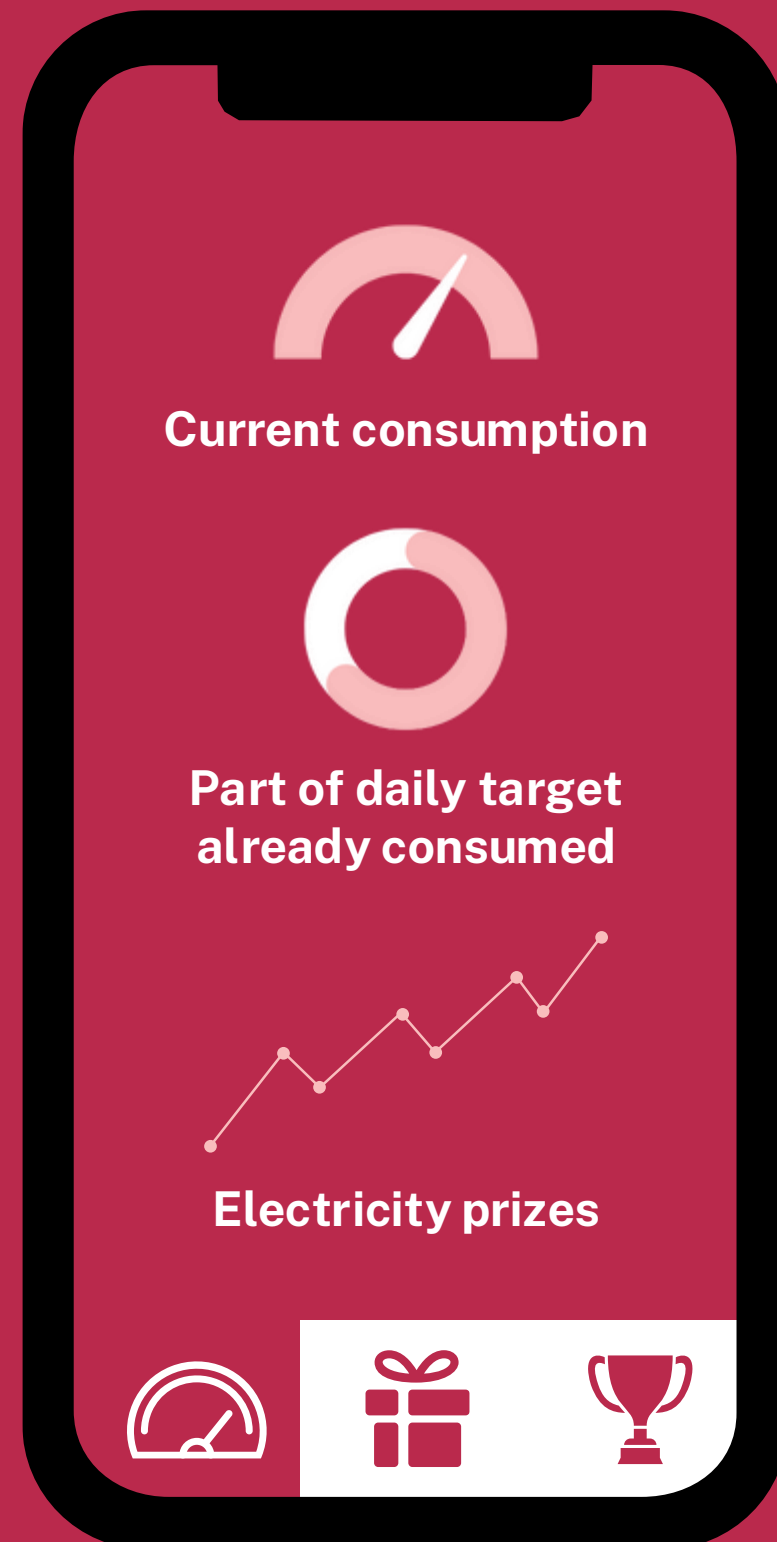

Coupled

Gamified Digital App

- Dashboard
- Rewards
- Scoreboard

- Perform better every day!
- Win rewards for your good performance.
- Compare your score with your friend!

Live Dashboard

The Rewards screen has a white background. At the top, the text "Your personalized saving goals" is displayed above a progress bar. Below this, a blue callout box contains the text: "Congratulations Laurent, you won 10 points ! Your last week's consumption was 10% below the average for your type of building ! 20 points before your next reward :)". Underneath, a light blue box with a lightbulb icon is titled "Little Tip !" and contains the text: "You charged your EV during the night, try to charge it while your solar panel are producing energy next time ;)". A bottom navigation bar features three blue icons: a gauge, a gift box, and a trophy.

Rewards

The Score Board screen has a dark blue background. At the top, three medal icons (gold, silver, bronze) are positioned above the text "Best Consumption Optimizers". Below this, a table lists the top performers. A bottom navigation bar contains three white icons: a gauge, a gift box, and a trophy.

Best Consumption Optimizers	
	Eric - 130 pts
	Mira - 110 pts
	Vanessa - 95 pts
	Rania - 80 pts
	Noé - 70 pts

Score Board

Desirability - Value created for customers

Access to rewards

Partner products, coupons,
special offers

Community movement

Mutual positive influence

Increased accessibility of consumption optimization

Energy Bill Reduction

Optimized consumption

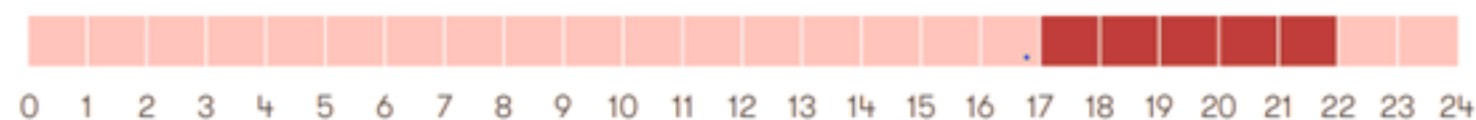

Savings Estimation

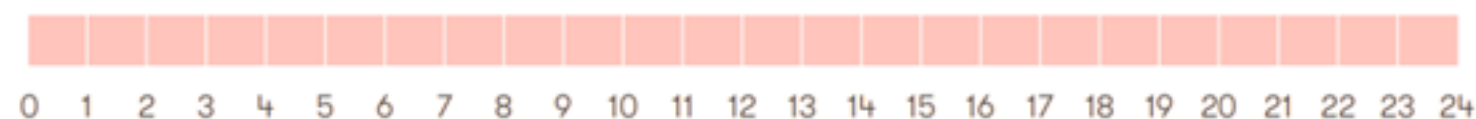

Double Electricity Tariffs 2026 (ct/kWh)

Double Tariffs	Heures Pleines	Heures Creuses
Electricity	18.28	12.94
Romande grid	12.22	7.19
Swissgrid	1.71	1,12

Lundi à vendredi

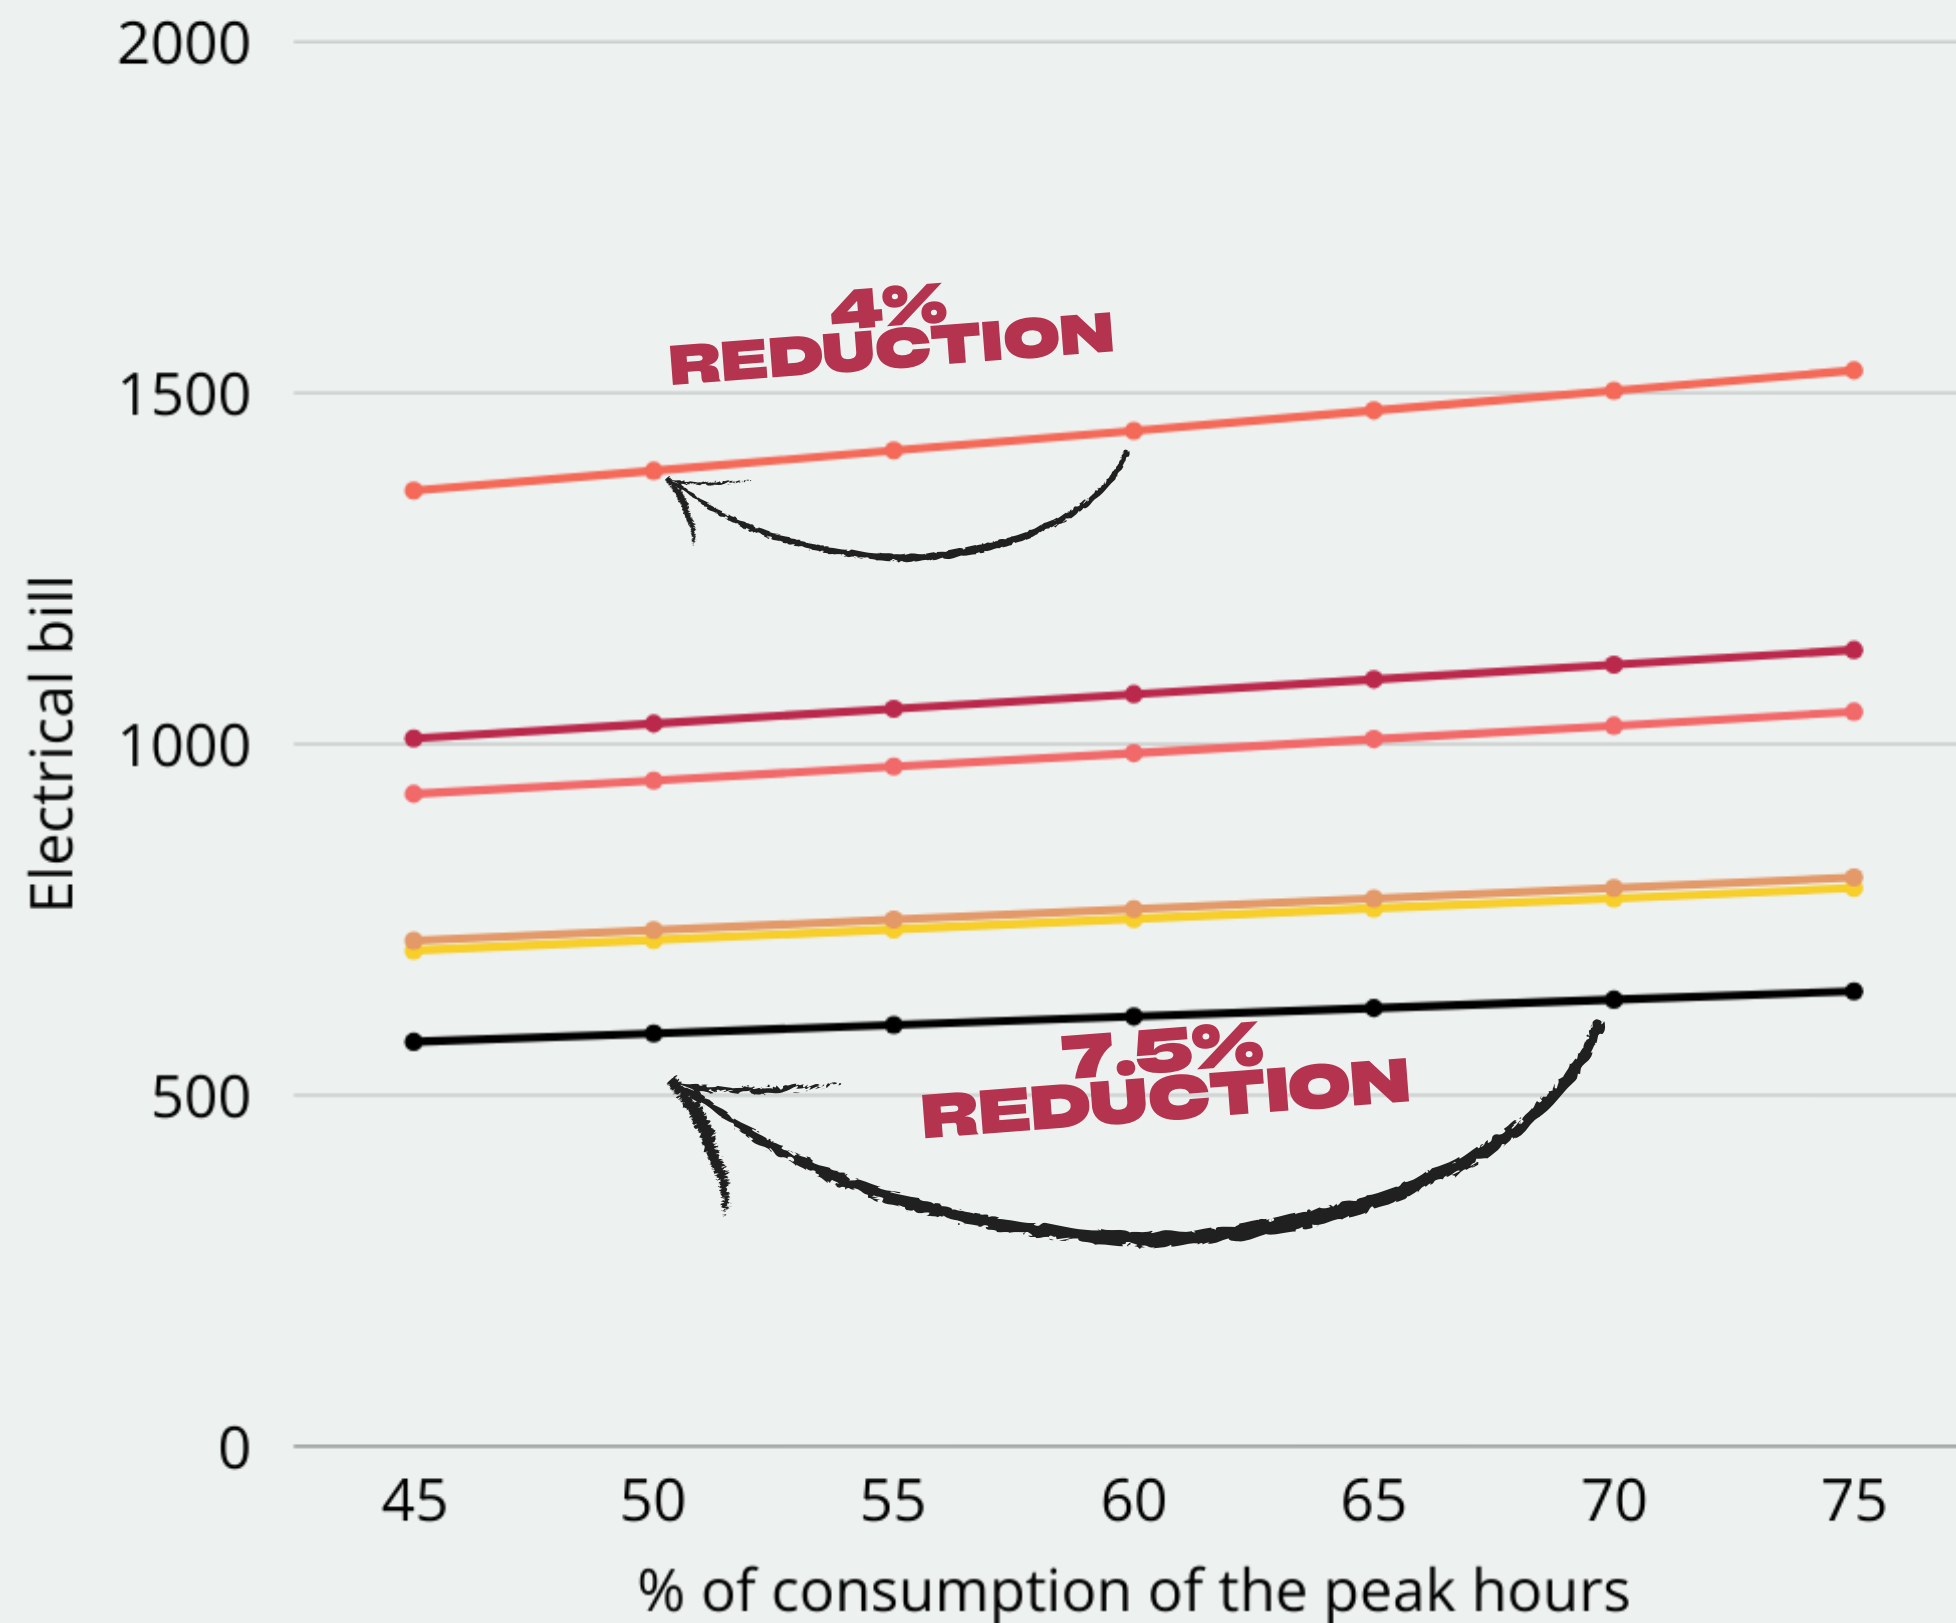

Samedi et dimanche

■ Heures pleines
■ Heures creuses

Technical Feasibility

Existing Romande Energie App
Foundation to build on

Outsourcing of EMS
No hardware development

Relatively light IT development
Integration of EMS data

Viability for Romande Energie

Costs

Limited development costs

→ Existing app, no R&D, ...

Marketing campaigns

→ Insure a high adoption rate

Benefits

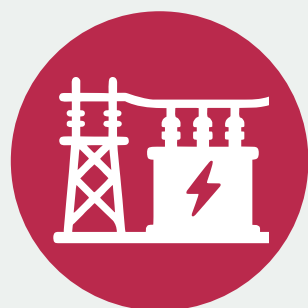

Alignment of production and consumption

Encourage to consume out of peak times

Raise customer awareness about energy transition

In line with Romande's Mission

Limit grid cost

Grid stabilization

Customer loyalty creation

Advantage in case of liberalization

Key learnings & surprises

- 🔑 Gamification = strong driver
- 🔑 Result of estimates

Validated Assumptions

- ✓ Success of EMS experiment for grid stabilization
- ✓ Customer engagement through gamification

Trustworthiness

- ♥ Satisfaction of current customer base
- ♥ Reputation of platform partners
- ♥ Customer control of energy management

Call to action

Next steps

Develop and implement the app

Launch awareness campaign

→ Communication & marketing

Form partnerships to offer rewards

→ Incentives

Planify the gamification

→ Create rankings & gamification rules

Introduce dynamic tariffs

Possible challenges

Difficulty of EMS adoption

Data privacy and Security

Commitment: a large base of willing users is needed to make an impact

***By democratizing energy management, we
increase customer engagement and awareness
while contributing to grid stability***
